

FREEZE EFFECT IMAGE & ANIMATION PROMPT LIBRARY

Biblioteca completa de prompts de imagem e animação para criação do efeito bullet-time com inteligência artificial.

✂ TOOLS USED (FERRAMENTAS UTILIZADAS)

1. Image Generation (Foto Âncora)

ChatGPT (GPT Image) • Midjourney • Google
Imagen

2. Vídeo Generation (Órbita 180°)

VOSU AI • Google Veo • Kling AI • Sora

COMO USAR ESTA BIBLIOTECA (FLUXO EM 2 PASSOS):

Passo 1 (Foto Âncora): Gere a imagem utilizando a foto do seu personagem com a tag de referência `@img` para fixar a fisionomia e a postura congelada no ar.

Passo 2 (Animação de Órbita): Suba a imagem gerada no modelo de vídeo (Image-to-Video) e cole o *Animation Prompt* correspondente. O personagem e todos os objetos ficam 100% congelados no tempo enquanto a câmera completa a órbita de 180 graus.

SCENE 01

Suspended Above the City

Bullet-Time Urbano

📁 STEP 1: IMAGE PROMPT (FOTO ÂNCORA)

GPT IMAGE / MIDJOURNEY

Create a photorealistic cinematic freeze-frame using @img as the exact male identity reference. Preserve his facial structure, hairstyle, skin tone, facial hair, age, and body proportions without beautification. Show him suspended high above a city street, caught in a dramatic falling pose. His torso leans backward, one open hand reaches toward the camera with fingers spread, and one bent leg projects toward the lens, making the shoe sole appear large in the foreground. His other leg extends diagonally outward. His mouth is open in surprise. Dress him in a plain white crew-neck T-shirt, blue jeans, tan rubber-soled casual shoes, and black sunglasses. Far below, show an asphalt street with lane markings, parked cars, tiny pedestrians, leafy trees, and tall stone buildings. Suspend a smartphone, keys, loose coins, and white papers around him at different depths. Shoot from above, looking steeply downward with a 24mm wide-angle lens. Keep his face recognizable, with perspective exaggeration concentrated on the reaching hand and foreground shoe. Bright midday sunlight, realistic shadows, natural colors, crisp textures, every object frozen sharply.

🚫 NEGATIVE PROMPT

Different identity, altered facial features, changed hairstyle, distorted face, extra fingers, extra limbs, duplicate person, malformed hands, warped buildings, motion blur, illustration, blood, injuries, text, captions, logos, watermarks, interface elements.

📁 STEP 2: ANIMATION PROMPT (IMAGE-TO-VIDEO)

VOSU / VEO / KLING

Create a cinematic bullet-time shot using the reference image. Everything in the scene must remain completely frozen in time throughout the entire video. The male character must remain perfectly frozen in the exact falling pose shown in the reference, with absolutely no body movement, no head movement, no facial movement, no blinking, no breathing animation, no hair movement, no clothing movement and no change in expression. The smartphone, keys, coins, papers and every other airborne object must remain completely suspended and locked in their exact positions. The cars, pedestrians, trees, buildings, street and entire city environment below must also remain completely frozen. The character must not continue falling or move downward. Only the camera moves. Smoothly orbit the camera around the completely frozen character in a cinematic 180-degree arc during the full duration of the shot. Start directly from the front of the character, move naturally around one side, reach the 90-degree side profile around the middle of the video, then continue around and finish directly behind the character at 180 degrees near the end. Use a controlled medium-slow orbital speed – clearly moving throughout the shot, but never fast, rushed or extremely slow. Keep the speed smooth and consistent from beginning to end. The camera must physically travel around the character in 3D space while maintaining a consistent distance and keeping him as the fixed center point. The changing camera perspective should create strong realistic 3D parallax between the frozen phone, keys, coins, character and distant city below. The character's face and identity must remain exactly consistent with the reference. Maintain the exact clothing, pose, proportions, lighting and object positions. Photorealistic cinematic lighting, realistic depth of field, dramatic height perspective, high-end Hollywood cinematography, Matrix-style bullet-time effect, ultra-stable camera movement, one continuous seamless shot, no cuts.

🕒 CAMERA TIMING: FRONT → 45° → SIDE 90° → 135° → BACK 180°. Medium-slow constant speed. ZERO scene motion except camera.

 STEP 1: IMAGE PROMPT (FOTO ÂNCORA)

Create a photorealistic cinematic freeze-frame featuring the exact male character from @img. Preserve his face, hairstyle, facial hair, skin tone, age, and natural body proportions. Position him floating horizontally above a pale concrete floor, with his chest facing downward and his face turned upward toward the camera. One arm reaches directly toward the lens with an open palm and naturally spread fingers; the other arm stretches backward to the side. His legs trail behind his torso, largely hidden by perspective. Give him a surprised expression with an open mouth. He wears a black and mustard-brown horizontally striped sweater, dark trousers, and clear-lens rectangular black glasses. Use a simple outdoor courtyard with a warm salmon-colored plaster wall behind him. Surround him with numerous white printed documents frozen in midair, some close to the lens and others near the floor. The document print is subtle and indistinct. Cast a strong, coherent shadow of his floating body and scattered papers onto the concrete. Elevated camera looking downward, 24mm wide-angle perspective, bright directional sunlight, crisp focus, warm natural color grading.

 NEGATIVE PROMPT

Identity drift, different face, standing pose, feet touching the floor, extra arms, malformed fingers, duplicate papers with identical shapes, floating shadows, soft motion blur, cartoon appearance, prominent readable text, captions, watermarks, logos, UI overlays.

 STEP 2: ANIMATION PROMPT (IMAGE-TO-VIDEO)

Create a cinematic bullet-time shot using the reference image. Everything in the scene must remain completely frozen in time throughout the entire video. The male character must remain perfectly frozen in the exact horizontal airborne pose shown in the reference, with absolutely no body movement, no head movement, no facial movement, no blinking, no breathing animation, no hair movement, no clothing movement and no change in expression. Every sheet of paper surrounding him must remain completely suspended in its exact original position, angle, orientation and shape. The papers must not flutter, rotate, drift or fall. The character's shadow, ground and entire environment must remain static. Only the camera moves. Smoothly orbit the camera around the completely frozen character in a cinematic 180-degree arc during the full duration of the shot. Begin directly from the front, gradually travel around one side, reach the character's side profile at approximately 90 degrees around the middle of the shot, then continue around until reaching the back view at exactly 180 degrees near the end. Use a controlled medium-slow orbital speed that produces continuous visible movement without feeling either fast or excessively slow. Keep the character as the fixed center of the orbit and maintain a consistent camera-to-subject distance. As the viewpoint changes, the frozen foreground papers should create dramatic natural parallax against the character and background, but the papers themselves must remain perfectly stationary in 3D space. Preserve the character's exact face, identity, clothing, body proportions and pose. Photorealistic lighting, realistic depth of field, high-speed photography aesthetic, premium Hollywood cinematography, Matrix-style bullet-time effect, smooth stabilized camera movement, one continuous seamless shot, no cuts.

 **CAMERA TIMING: FRONT → 45° → SIDE 90° → 135° → BACK 180°.** Complete the movement evenly across the full shot at medium-slow constant speed.

 STEP 1: IMAGE PROMPT (FOTO ÂNCORA)

Create a photorealistic fashion-editorial freeze-frame using @img as the exact male identity reference. Retain his recognizable face, hairstyle, facial hair, skin tone, age, height, and body proportions. Capture him suspended just above a cobblestone street in an exaggerated backward stumble. One leg kicks high toward the upper-left foreground, while the other bends downward, its shoe hovering close to the pavement. One hand stretches overhead toward a floating leather satchel, and the opposite arm extends outward for balance. His face remains clearly visible with a surprised, open-mouthed expression. Dress him in a long camel-colored belted wool coat, a cream knit sweater, tailored tan trousers, and polished brown leather loafers. Freeze the coat hem and belt ends in midair. Above him, suspend an open brown leather satchel with keys, coins, a small notebook, a pen, and a cardholder spilling out. Set the scene on a sunlit Parisian street with cream limestone buildings, wrought-iron balconies, a traditional black streetlamp, and a raised sidewalk. Low camera near knee height, 28mm lens, full-body composition, warm afternoon light, detailed fabric textures, realistic contact-free shadows, every airborne object sharply frozen.

 NEGATIVE PROMPT

Different identity, feminine body proportions, high heels, altered height, face distortion, extra limbs, broken joints, merged accessories, duplicate bags, motion blur, cartoon rendering, text, captions, logos, watermarks, interface elements.

 STEP 2: ANIMATION PROMPT (IMAGE-TO-VIDEO)

Create a cinematic bullet-time shot using the reference image. Everything in the scene must remain completely frozen in time throughout the entire video. The male character must remain perfectly frozen in the exact off-balance pose shown in the reference, with absolutely no body movement, facial movement, blinking, breathing animation, head movement, hair movement, clothing movement or expression change. The brown leather bag, keys, coins, notebook, pen and every other airborne object must remain perfectly suspended and locked at their exact positions in 3D space. Nothing can fall, rotate, drift or move. His coat and clothing must remain completely frozen with no wind movement. The street, buildings, lamps and entire background environment must also remain static. Only the camera moves. Smoothly orbit the camera around the completely frozen character in a cinematic 180-degree arc during the full duration of the shot. Start directly from the front, gradually travel around one side, reach the 90-degree side profile around the middle of the video, then continue around until reaching directly behind the character at exactly 180 degrees. Use a controlled medium-slow orbital speed, with clear continuous camera movement that never becomes too fast or excessively slow. Keep the character centered and maintain a consistent camera-to-subject distance. The frozen bag, keys, coins and other objects should create strong multilayer 3D parallax as the camera changes perspective, while remaining completely stationary themselves. Preserve the character's exact identity, face, clothing, body proportions, pose and environment. Photorealistic cinematic lighting, realistic depth of field, premium editorial cinematography, Matrix-style bullet-time effect, smooth stabilized camera movement, one continuous seamless shot, no cuts.

 **CAMERA TIMING: FRONT → 45° → SIDE 90° → 135° → BACK 180°.** Maintain balanced medium-slow speed. ZERO scene motion except camera.

 STEP 1: IMAGE PROMPT (FOTO ÂNCORA)

Create a photorealistic action freeze-frame starring the exact male character from @img. Preserve his facial identity, skin tone, facial hair, age, and hairstyle; allow only natural movement of his existing hair. Show him at the peak of a powerful jump, with both knees tucked tightly toward his chest and both boots fully airborne. His body turns slightly sideways while his face looks toward the camera. One arm extends high above his shoulder, gripping a green garden hose, while the other hand holds the lower section beside his boots. The hose forms a broad U-shaped loop beneath and around his tucked legs. Water sprays from the open end near his lower hand, creating an expansive arc of individually visible droplets across the foreground. He wears a mustard-yellow T-shirt darkened in places by water, loose dark-blue jeans, worn tan work boots, and narrow silver-framed sunglasses. Background: a neatly trimmed green hedge and pale blue sky. Low-angle 35mm photograph, tight full-body framing, bright summer daylight, fast-shutter sharpness on his face and body, sparkling water droplets, natural green and yellow tones.

 NEGATIVE PROMPT

Different face, changed hair color, untucked standing pose, feet on the ground, skipping rope replacing the hose, disconnected hose sections, impossible water flow, extra fingers, extra limbs, distorted boots, excessive blur, text, logos, watermarks, UI elements.

 STEP 2: ANIMATION PROMPT (IMAGE-TO-VIDEO)

Create a cinematic bullet-time shot using the reference image. Everything in the scene must remain completely frozen in time throughout the entire video. The male character must remain perfectly frozen in the exact airborne crouching pose shown in the reference while holding the garden hose exactly as shown. There must be absolutely no body movement, facial movement, blinking, breathing animation, head movement, hair movement, clothing movement or pose change.

The entire curved stream of water and every individual water droplet must remain perfectly frozen in mid-air in its exact original position and shape. The water must not flow, fall, splash, regenerate or change shape. The hose must remain completely fixed. The grass, trees, house, shadows and entire environment must also remain static.

Only the camera moves. Smoothly orbit the camera around the completely frozen character in a cinematic 180-degree arc during the full duration of the shot. Begin directly from the front, gradually move around one side, reach the 90-degree side view around the middle, then continue until the camera reaches directly behind the character at exactly 180 degrees. Use a controlled medium-slow orbital speed, clearly moving but never rushing and never becoming excessively slow.

The camera should physically travel through the 3D space around the suspended water composition, producing dramatic parallax between foreground droplets, the character, the frozen water arc and the background. Keep the character as the fixed center point and maintain a consistent orbital radius. Preserve his exact face, identity, clothing, body proportions and pose. Photorealistic lighting, crystal-clear suspended water droplets, realistic refraction, cinematic depth of field, high-speed Phantom-camera aesthetic, Matrix-style bullet time, ultra-stable camera movement, one continuous seamless shot, no cuts.

 **CAMERA TIMING: FRONT → 45° → SIDE 90° → 135° → BACK 180°.** Water and character remain **ABSOLUTELY FROZEN**. ZERO scene motion except camera.

 STEP 1: IMAGE PROMPT (FOTO ÂNCORA)

Create a photorealistic playful sports freeze-frame using @img as the exact male identity reference. Preserve his face, hairstyle, facial hair, skin tone, age, and natural body proportions. Capture him suspended in midair above a sunny suburban driveway, leaning backward in a dynamic diagonal pose. Both arms reach upward with open hands. One leg kicks high toward the upper-right corner, while the other stretches diagonally toward the lower-right foreground. His torso faces the camera, and his expression is excited and surprised. Dress him in a fitted black sleeveless athletic shirt, black sports shorts, and red low-top sneakers with white soles. Surround him with floating tennis rackets at different angles, bright yellow-green tennis balls, and curling pastel pink and pale-blue streamers. Place a few larger balls and a partially cropped racket close to the lens, with additional rackets and balls farther behind him. Use a white suburban house with dark shutters, a white picket fence, green shrubs, and clear blue sky as the background. Low camera, 24mm wide-angle lens, full-body framing, strong midday sunshine, coherent shadows beneath the airborne objects, crisp commercial photography with vivid natural colors.

 NEGATIVE PROMPT

Different identity, changed body proportions, feminine outfit, extra arms or legs, malformed hands, bent racket frames, tangled anatomy, duplicate person, feet planted on the ground, motion blur, text, headline, social media icons, captions, watermarks, logos.

 STEP 2: ANIMATION PROMPT (IMAGE-TO-VIDEO)

Create a cinematic bullet-time shot using the reference image. Everything in the scene must remain completely frozen in time throughout the entire video. The male character must remain perfectly frozen in the exact dynamic airborne tennis pose shown in the reference, with absolutely no body movement, head movement, facial movement, blinking, breathing animation, hair movement, clothing movement or expression change. Every tennis ball, the tennis racket, colorful ribbons and every other suspended element must remain completely frozen in its exact original position in mid-air. The tennis balls must not travel, fall, spin or rotate. The racket must not move or rotate. The ribbons must not flutter. The house, trees, court and entire environment must remain completely static. Only the camera moves. Smoothly orbit the camera around the completely frozen character in a cinematic 180-degree arc during the full duration of the shot. Begin directly from the front, gradually move around one side, reach the 90-degree side profile around the middle of the shot, then continue around and finish directly behind the character at exactly 180 degrees. Use a controlled medium-slow orbital speed – continuously moving and visually noticeable, but neither fast nor excessively slow. Keep the character as the fixed center of the orbit and maintain a consistent camera distance. The large foreground tennis balls, racket and smaller background balls should create dramatic realistic 3D parallax as the camera physically travels around the scene. Preserve the character's exact face, identity, clothing, body proportions and pose throughout the entire orbit. Photorealistic cinematic lighting, realistic depth of field, premium sports-commercial cinematography, high-speed photography aesthetic, Matrix-style bullet-time effect, ultra-stable camera movement, one continuous seamless shot, no cuts.

 **CAMERA TIMING: FRONT → 45° → SIDE 90° → 135° → BACK 180°. EVERYTHING REMAINS PERFECTLY FROZEN. ZERO scene motion except camera.**
